for the automated machine. Many many happy years. The present invention relates to a new and distinct cultivar of Hydrangea plant botanically known as Hydrangea paniculata and hereinafter referred to by the cultivar name 'Agrihy1'. The new cultivar originated in a controlled breeding program in Elburn, Ill. during June 2003. The objective of the breeding program was the development of Hydrangea cultivars with freely branching and medium sized flower-buds, medium green-colored foliage, and a mounded growth habit. The new cultivar is the result of cross-pollination. The female (seed) parent of the new cultivar is the proprietary Hydrangea paniculata breeding selection designated H200, not patented, characterized by its white-colored flowers, medium green-colored foliage, and moderately vigorous, compact-upright growth habit. The male (pollen) parent of the new cultivar is unknown. The new cultivar was discovered and selected as a single flowering plant within the progeny of the above stated cross-pollination during November 2003 in a controlled environment in Elburn, Ill. Asexual reproduction of the new cultivar by softwood stem cuttings since November 2003 in Elburn, Ill. has demonstrated that the new cultivar reproduces true to type with all characteristics, as herein described, firmly fixed and retained through successive generations of such asexual propagation. The present invention relates to a device for recording and reproducing recorded information, and more particularly

to a device for recording and reproducing recorded information with a high resolution by an optical magnetic recording and reproducing system. With the spread of computers, documents including letters, drawings, etc. are transmitted by facsimile machines, electronic mail, and the like, and are stored in various sorts of electronic memories. Recently, various kinds of magnetic disk devices having a higher capacity, greater capacity, higher speed, and lower cost have been developed as the devices for recording and reproducing recorded information. In particular, a magnetic disk device called a hard disk is utilized as a magnetic disk device for computers or a magnetic disk device for a tape medium, but has problems that no electrical contact is possible and thus its head is in contact with the magnetic disk. Therefore, magnetic heads cannot be utilized for the device. Instead, a read head and a write head must be used. However, since the area of the read head cannot be made large, the resolution cannot be made 82157476af
